Stas Lohvinov

Senior Frontend Developer - PixiJS/Canvas games

stas.lohvinov@proton.me | linkedin.com/in/stas-lohvinov | Ukraine, remote

Frontend Developer with **8+ years of experience**, including 4 years building browser-based **iGaming products** with TypeScript/JavaScript, PixiJS, Phaser, Spine, and Canvas API. **Delivered 25+ cross-platform games**, including slots, cascades, and card titles for regulated markets. Experienced in game loops, animation integration, and rendering optimisation - improving load time, memory usage and draw-call count. Own technical decisions on titles end-to-end, from estimation to release, and coordinate delivery across art, backend and QA.

Skills

Languages & Frameworks: TypeScript, JavaScript, React, Redux, Cocos2d, Phaser
Rendering & Animation: PixiJS, Canvas API, Spine, GSAP
Tooling: Webpack, Vite, TexturePacker, Git, Jest, Mocha
Architecture: OOP, state machines, game loops, WebSockets
AI tools: Claude Code, Cursor

Professional experience

Senior frontend game developer

Mar 2026 - Oct 2026
NeverEnding
Ukraine, remote

Built browser-based slot games on a proprietary Pixi.js engine, taking titles from planning and estimation through to production release, and contributing improvements back to the engine itself.

- Delivered 4 slot games to production using PixiJS, Spine, and GSAP
- Drove unification of backend response schema - authored the typed, documented specification, aligned frontend and backend teams around it, and settled it as a standard for subsequent titles
- Optimised rendering across multiple titles: cut bundle size by 40%, reduced memory footprint, and reduced draw calls by 32%
- Extended the engine with audiosprite support, consolidating dozens of SFX files into a single asset and cutting load requests per game and reducing initial load time by 15%

Frontend game developer

Apr 2024 - Dec 2025
Innovecs
Ukraine, remote

Delivered and optimised browser-based slot games using a proprietary TypeScript/PixiJS framework with state machines, sequential flows, and React-based UI elements.

- Shipped 4 brand new and 8 reskinned games meeting consistently tight production deadlines
- Led optimisation of a production title, cutting bundle size by 35%
- Built game features (free spins, bonus rounds, turbo/auto modes) and integrated compliance controls for regulated market deployment
- Ensured games cross-platform consistency (desktop/mobile) while collaborating with art, animation, audio, and QA teams

TypeScript developer

Dec 2021 - Mar 2024
DXC Luxoft
Ukraine, remote

Owned the VS Code extension component (TypeScript), providing a UI layer for build, run, and debug workflows that replaced manual CLI commands with native VS Code UI elements and command palette.

- Aligned TypeScript frontend with backend APIs to deliver cross-component functionality
- Increased unit test coverage from 40% to 90%, ensuring stability as the component evolved

Frontend game developer

Aug 2019 - Nov 2021
Lucky Elephant Gaming
Ukraine, remote

Developed browser-based gambling games using Phaser for casino and sports betting platforms. Initially contributed to platform frontend features before transitioning to full-time game development.

- Delivered 14 games (including Baccarat, Hi-Lo, roulette), licensed and deployed to production across multiple casinos
- Created a boilerplate framework that accelerated development time for subsequent games
- Integrated games with platform APIs for authentication, game state persistence, and transaction handling
- Built a live betting dashboard with WebSocket-based real-time updates for sports events and odds changes

Earlier: **Frontend developer**, various projects

Dec 2017 - Jul 2019

Information on earlier projects can be provided upon request

Certifications

AWS Certified Developer – Associate — February 2025, Amazon Web Services
